

Testing NADI Md

Here is a simple test for nadi md file. Nadi md files are markdown files with nadi codes in them that can be run and outputs shown.

Code in code blocks will run if provided with run keyword, the results will follow.

```
net.load_str("a -> b")
nodes.NAME
```

Results:

```
["b", "a"]
```

Every run is done in the same context.

```
nodes.NAME
```

Results:

```
["b", "a"]
```

If you want to have a new session, use the new option to clear the context.

```
nodes.NAME
```

Results:

```
[]
```

If an error occurred it will also show that, but it will not halt the whole rendering process, so be careful about that. Future versions will add a flag to halt the process.

```
somefunc(12, 90, true)
```

Error:

```
FunctionNotFoundError at Line 1 Column 1: env function named "somefunc" not found
```
